If the content of the website can be changed in real-time based on the user request then this could be an example of

Options

Atte

This problem has only one correct answer

 Static Website Dynamic Website Both None of these

Hurray! Correct Answer

Solution Description

Explanation: In a Dynamic website, content can be changed at run time real-time based on the user request.

For example, when a user opens Facebook, the content of the Facebook website is customised/personalised based on the user profile.

Static Content

[Send Feedback](#)

Which website will return the same hard-coded content from the server whenever a particular resource is requested?

Note: Hard-coded contents are static content that can not be changed without replacing the website's pages with updated or new files.

Attempt

Options

- Dynamic Website
 - Both
 - Static Website
 - None of the above
-  Hurray! Correct Answer

Solution Description

Explanation: Static and Dynamic websites both can return hard-coded content.

Static vs Dynamic Website

Send Feedback

A website has links to other websites and contains a lot of media and text content -

1. It's the simplest form of the dynamic website as a user can click on the link, and the webpage will be changed based on user input.

2. It's a static website as clicking on the link will navigate us to other websites, but the content of each web page will remain the same for all users.

3. It's a dynamic website as it contains media content.

Hurray! Correct Answer

- Only statement 1 is true.
- Only statement 2 is true.
- Only statement 3 is true.
- Statement 1 and 3 are true.

Solution Description

Explanation: Web pages with hyperlinks or media contents are not considered dynamic unless the web page's content can be changed at real-time.
