### Tag vs Element

[Send Feedback](#)

What is the difference between an HTML tag and an HTML element?

- Both mean the same thing.
- HTML tags are used as a container for HTML elements
- HTML elements are specified keywords unlike HTML tags
- Hurraay! Correct Answer

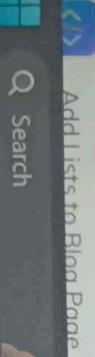

### Solution Description

Explanation: HTML tags are used to define starting and ending of an HTML element using opening and closing tags. Whereas an HTML element is a collection of these HTML tags and all the content in between them.

### Options

Attempts left: 12

This problem has only one correct answer

30.0/30

30.0/30

Find File Path

30.0/30

### Solution Description

To define internal links, we need to define what this internal link will be referring to. We know internal links are the ones that refer to web content on the same web page. For that referencing, we need to use the id attribute (NO two HTML elements can have the same ID) for unique identification (since one link can refer to one element only)

The screenshot shows a mobile application interface for learning HTML. At the top, there's a navigation bar with icons for back, forward, search, and other functions. The main content area has a blue header with the text "Intro to HTML". Below it, a section titled "Deadline" shows "Mar 23, 2023, 11:59 PM". A large orange button labeled "Problem" is prominent. To its right, a red button labeled "Result" and a yellow button labeled "Send Feedback" are visible.

The main list contains the following items:

- Link to Email • 30.0/30
- Path of Image • 30.0/30
- DL Tag • 30.0/30
- Describe List Item • 30.0/30
- Image Dimensions • 30.0/30

A "Practice" button is located at the bottom left. At the bottom right, there's a "SUBMIT" button with a circular arrow icon, and a "PREVIOUS" and "NEXT" button.

**Solution Description**

Explanation: If you want to go one step higher in the file structure to reach the parent folder, you use `../`.

Now you are in the parent folder that contains a folder called 'image' that contains the image 'pic'. Hence you use `../image/pic/img`.

## Image Dimensions

Send Feedback

Dimensions of an image should be preferably specified in % instead of a pure number. Comment. [multiple answers correct]

## Options

This problem may have one or more correct answers.

- It does not matter since the same thing can be achieved using both.
- % adjusts image size according to the screen resolution unlike a pure number.

- Image dimensions specified using a pure number may appear small or large on different screens with different dimensions.
- % is not preferable over a pure number because a pure number actually specifies the image dimensions.
