Section Element

[Send Feedback](#)

Consider the following statements regarding the section element

1. It is a semantic element as it clearly describes its meaning to both, the browser and the developer.
2. The content of a semantic element shares a single theme.
3. It is a non-semantic element as it gives no information about its content.
4. It is a non-semantic element as it is a generic block element used to wrap related content.

Select the correct statement:

i You have max 2 attempts to score in this question.

Attempts left **1/2**

Options

This problem has only one correct answer

- Only 1 is correct.
- Both 1 and 2 are correct.
- Only 3 is correct.
- Both 3 and 4 are correct.

 Hurray! Correct Answer

Solution Description

Explanation: Section tag is a semantic tag as it clearly describes its meaning to the browser and the developer. Although it is a generic block element, it is used to wrap related content.

HTML Table

[Send Feedback](#)

Which of the following is/are true regarding HTML tables?
(multiple options correct).

Hint: Code and experiment to answer this.

i You have max 2 attempts to score in this question.

Options

Attempts left: **1/2**

This problem may have one or more correct answers

- <table> is a semantic tag. ✓
- It doesn't matter if the tr, td elements are wrapped in the table element or not. The output in the browser will be the same for both.
- The tr, td elements have no significance of their own (as a table row or table data) until we wrap them in the table tag. ✓
- The table is a block element. ✓

 Hurray! Correct Answer

Solution Description
